POWERING THE FUTURE OF BUILDING

REBUILD is the sector's platform and flagship showcase, promoting a new, more **off-site, sustainable, efficient and connected model** that aims to speed up completion times, boost housing construction, establish robust quality standards in the face of labour challenges, and foster collaboration between different manufacturers.

Today, buildings are no longer seen as a collection of isolated materials, but rather as the integration of systems capable of working in a coordinated manner to deliver higher quality, optimise processes, reduce construction times and speed up project handover.

Under the slogan "**INTEGRATING BUILDING SYSTEMS**", REBUILD 2027 positions itself as the sector's meeting point to promote advanced models of construction solutions that

reflect this transformation. At the heart of this change are builders, architects, developers, technical architects and engineering firms: the key players driving the demand for more off-site, digitalised and sustainable construction.

The integration of construction, technological and energy systems, together with collaboration between manufacturers, is key to optimising building projects.

REBUILD 2027 is the major platform where the industry brings together innovation, industrialisation and technology to accelerate housing construction, improve productivity and move towards more efficient, decarbonised buildings that are ready for the challenges of tomorrow.
